

What types of group scope are there?

Group Scope	Group can be assigned permissions in...
Universal	Any domain or forest
Global	Member permissions can be assigned in any domain
Domain local	Member permissions can be assigned only within the same domain as the parent domain local group

The table below summarizes how the 3 different group scopes work:

Group scope	Group members	Scope conversion	Membership
Domain local	Users, computers, and global groups from any trusted domain, external domains, or other forests. Universal groups from any domain in the same forest, external domains, or other forests. Domain local groups from the same domain.	Can be converted to universal scope if it does not contain other domain local groups as members.	Can be added to other domain local groups in the same domain.
Global	Users, computers, and other global groups from the same domain.	Can be converted to universal scope if it's not a member of other global groups.	Can be added to domain local and universal groups from any domain in the same forest. Can be added to other global groups in the same domain. Can be added to domain local groups from any trusting domain.
Universal	Users, computers, global groups, and universal groups from any domain in the same forest.	Can be converted to domain local scope if it's not a member of other universal groups. Can be converted to global scope if it does not contain other universal groups as members.	Can be added to domain local groups and universal groups in the same forest Can be added to domain local groups from trusting forests.
